

Open Questions

- Q1** Do you have any specific aesthetic preferences (e.g., dark mode by default, specific primary colors) beyond the default shadcn/ui styles?
- Q2** For the NEXT_PUBLIC_API_URL environment variable in your frontend/.env.local, is it currently set to http://localhost:8000 for local development?
- Q3** Since Gemini multimodal is being removed, I will use PyMuPDF (which is highly efficient and not banned by the rules) to extract text from PDFs before sending it to Groq for structuring. Does that work for you?

0

Backend Migration — Gemini → Groq

Strip out google.genai and replace with groq across all backend services.

MODIFY

backend/requirements.txt

Remove google-genai, add PyMuPDF for PDF text extraction.

MODIFY

backend/services/parser.py

Replace Gemini multimodal parsing with PyMuPDF + Groq structuring for PDFs. Update DOCX structuring to use Groq.

MODIFY

backend/services/fit_score.py

Replace Gemini call for fit score explanation with Groq.

MODIFY

backend/services/agent.py

Replace Gemini call in draft_cover_letter_tool with Groq.

MODIFY

backend/run_tests.py

Remove Gemini tests and ensure all tests pass.

1

Job Hunter UI

Build the job search interface and connect it to the LangGraph agent endpoint.

NEW

frontend/components/fit-score-badge.tsx

Badge component displaying the candidate fit score.

NEW

frontend/components/job-card.tsx

Card component for individual job listings.

MODIFY

`frontend/app/(dashboard)/jobs/page.tsx`

Integrate job search UI with LangGraph agent endpoint.

2

CV Intelligence UI

Build the file dropzone for PDF/DOCX uploads and display parsed CV sections.

NEW

`frontend/components/cv-upload.tsx`

Drag-and-drop dropzone for PDF/DOCX CV uploads.

MODIFY

`frontend/app/(dashboard)/cv/page.tsx`

Show parsed CV sections returned from the backend.

3

AI Assistant UI

Build the streaming chat proxy and chat interface using Vercel AI SDK.

NEW

`frontend/app/api/chat/route.ts`

Streaming chat API proxy route.

NEW

`frontend/components/chat-interface.tsx`

Full chat UI with streaming support via Vercel AI SDK.

MODIFY

`frontend/app/(dashboard)/chat/page.tsx`

Wire chat interface into the dashboard layout.

4

Productivity Tracker UI

Kanban board, Calendar, Todos, Progress Dashboard, and Nudge Banner with Supabase realtime sync.

NEW

`frontend/components/kanban-board.tsx`

Drag-and-drop Kanban board with Supabase realtime sync.

NEW

`frontend/components/calendar-view.tsx`

Calendar view for tracking job application deadlines.

NEW

`frontend/components/todo-list.tsx`

Todo list component for task management.

NEW

`frontend/components/progress-dashboard.tsx`

Progress metrics dashboard across all job hunt stages.

NEW

`frontend/components/nudge-banner.tsx`

Contextual nudge banner powered by AI suggestions.

MODIFY

`frontend/app/(dashboard)/tracker/page.tsx`

Compose all tracker components into the dashboard page.

Verification Plan

1 Run Backend Tests

`python run_tests.py`

Verifies Groq replacement is complete and all existing tests pass.

2 CV Upload Test

Upload a sample PDF/DOCX

Confirms Groq-based parsing returns structured CV sections correctly.

3 Job Search Test

Search via frontend UI

Ensures the LangGraph agent endpoint is triggered and returns results.

4 Chat RAG Test

Ask "Am I ready for this role?"

Verifies streaming response and retrieval-augmented generation (RAG).

5 Kanban Sync Test

Drag job from "Saved" → "Applied"

Confirms Supabase realtime sync updates state across clients.
